OPERATION

This manual is furnished with each new model. It provides necessary operation and machine maintenance instructions.

Read this manual completely and understand the machine before operating or servicing it.

This machine will provide excellent service. However, the best results will be obtained at minimum costs if:

- The machine is operated with reasonable care.
- The machine is maintained regularly per the machine care instructions provided.
- The machine is maintained with supplied or equivalent parts.

SAFETY PRECAUTIONS

This machine is intended for industrial and commercial use. It is suited to scrub hard floors in an indoor environment and is not constructed for any other use. Use only recommended pads, brushes and cleaning detergents.

The following safety alert symbols are used throughout this manual as indicated in their description.

WARNING: To warn of hazards or unsafe practices which could result in severe personal injury or death.

FOR SAFETY: To identify actions which must be followed for safe operation of equipment.

The following information signals potentially dangerous conditions to the operator or equipment:

FOR SAFETY:

- 1. Do not operate machine:
 - Unless trained and authorized.
 - Unless operation manual is read and understood.
 - In flammable or explosive areas unless designed for use in those areas.
- 2. Before starting machine:
 - Make sure all safety devices are in place and operate properly.
- 3. When using machine:
 - Go slow on inclines and slippery surfaces.
 - Use care when reversing machine.
 - Always follow safety and traffic rules.
 - Report machine damage or faulty operation immediately.
- 4. Before leaving or servicing machine:
 - Stop on level surface.
 - Turn off machine.

5. When servicing machine:

- Avoid moving parts. Do not wear loose jackets, shirts, or sleeves.
- Block machine tires before jacking machine up.
- Use hoist or jack of adequate capacity to lift machine.
- Disconnect battery connections before working on machine.
- Wear protective gloves when handling batteries or battery cables.
- Avoid contact with battery acid.
- Use manufacturer supplied or approved replacement parts.

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep battery compartment open when charging.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank(s).

WARNING: Flammable materials or reactive metals can cause explosion or fire. Do not pick up.

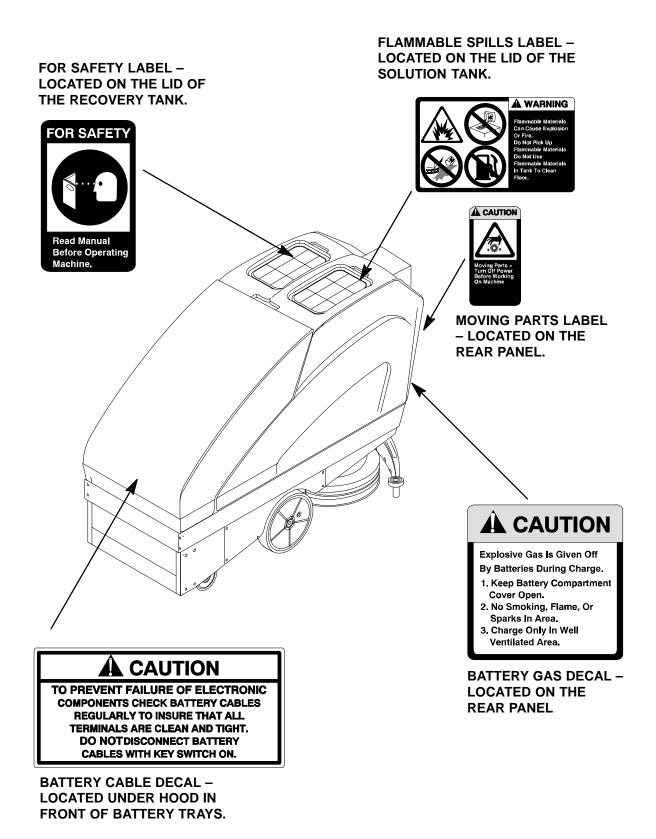

WARNING: Moving parts. Turn off power before working on machine.

IMPORTANT NOTICE TO OWNERS:

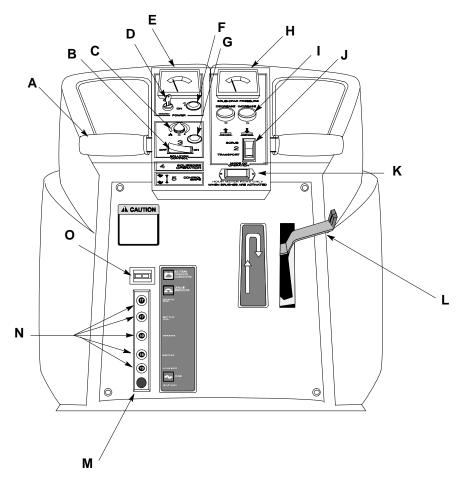

The foam filled tire option must be installed in place of the solid tires when the machine is used consistently on grouted tile floors to prevent tile damage and excessive machine component wear. Foam filled tires should also be used on soft surfaces such as sports floors to reduce wheel marking of surface.

ATTENTION: Usage of solid tires in the above conditions will void the warranty on drive system components.

The following safety labels are mounted on the machine in the locations indicated. If these or any label become damaged or illegible, install new labels in their place.

CONTROLS AND INSTRUMENTS

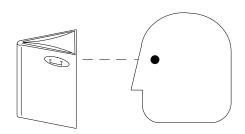

- A. Steering Handles
- B. Solution Flow On/Off Switch
- C. Solution Flow Control Knob
- D. Key Switch
- E. Battery Meter
- F. On/Off Pilot Light (Green)
- G. Solution Pilot Light (Blue)
- H. Pad Pressure Meter
- I. Brush Pressure Switch (Up/Down)
- J. Brush Switch
- K. Hour Meter
- L. Squeegee Lift Handle
- M. Fuse
- N. Circuit Breakers
- O. Battery Charger Connector

OPERATOR RESPONSIBILITY

The operator's responsibility is to take care of the daily maintenance and checkups of the machine to keep it in good working condition. The operator must inform the service mechanic or supervisor when the maintenance intervals are required as stated in the MAINTENANCE section of this manual.

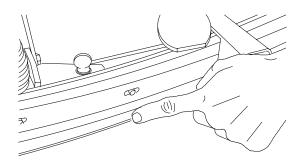

Read this manual carefully before operating this machine.

FOR SAFETY: Do not operate machine unless operation manual is read and understood.

After the first 50 hours (3 weeks) of operation the following procedures are recommended:

· Check the squeegee deflection.

Check the battery electrolyte level.

Check the battery cable connections.

RECEIPT OF MACHINE

Carefully check carton and machine for signs of damage. If damaged, **file claim with carrier immediately.** Concealed damage claims should be filed within 90 days of receipt. Retain all packing materials and delivery receipts for claim support.

BATTERY INSTALLATION

Battery installation must be completed before removing machine from pallet. After batteries are installed remove shipping screws (4) that mount front and rear of machine to pallet. Create a ramp and carefully push machine off pallet. Be certain that scrub head is in the up position. See page 41 for battery installation instructions.

BRUSH AND PAD DRIVER INSTALLATION

- 1. Make sure the scrubber head is in the "UP" position, and the key switch is turned "OFF."
- Slide the brush or pad driver under the scrubber head. Holding the brush or pad driver with both hands, lift it up to the drive hub and snap into position (Figure 1).

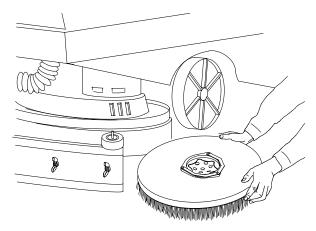

FIG. 1.

NOTE: Pads should be mounted to drivers before installation, for proper centering.

3. To remove the brush or pad driver, push down on the brush release pin, located on the scrubber head, behind each scrub motor (Figure 2).

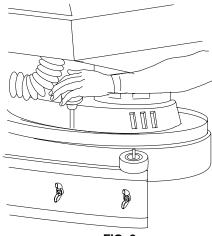

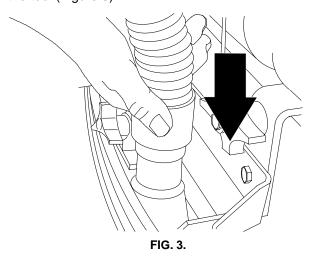

FIG. 2.

ATTENTION: Do not operate scrub motors without brushes or pad drivers (with pads) in place.

SQUEEGEE TOOL INSTALLATION

Slide the squeegee tool onto the bracket, with the wing screws loose. MAKE SURE the washers are **on top** of the bracket. Tighten the wing screws (HAND TIGHTEN ONLY). If they are too tight, this will defeat the breakaway feature should the tool get caught on an obstruction during use. Attach the pickup hose to the tool (Figure 3).

FILLING THE SOLUTION TANK

Tanks on the machine are made of polyethylene and are resistant to most cleaning solutions. CAUTION: DO NOT USE WATER IN EXCESS OF 66°C (150°F), as it can cause the material to become brittle and void the warranty.

Remove the clear lid from the solution tank (operator's left) and pour solution to the fill line located inside the tank. If powdered chemicals are being used, mix the chemical with water before putting it in the tank. This will help prevent clogging of plumbing, valves, etc.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank(s).

MACHINE OPERATION

- 1. Turn the ignition key to the "ON" position.
- Activate Scrub/Transport Switch to either transport (brush–up) or scrub (brush down) position (Figure 4).

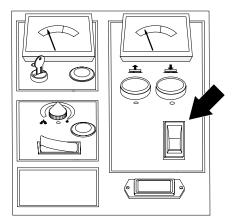

FIG. 4.

To Transport:

- Press bottom half of Scrub/Transport Switch to raise brush if you wish to transport the machine without scrubbing.
- To travel, twist the control grips forward. As you twist farther, the machine will travel faster.
- To stop, simply release the grips.
- For reverse travel, twist the grips backward.
 Reverse travel speed is limited for safety.

To Scrub:

Press and release the top half of Scrub/Transport
 Switch to lower brushes for scrubbing. The scrub
 head will lower to the floor and automatically select
 a pre-determined pressure, approximately 75 lbs.
 This setting is sufficient for most applications. If this
 pressure is right for your job, no additional operator
 settings are required.

OPERATION

To begin scrubbing, simply twist the handle grips forward. The machine will begin to move forward and the brushes will start spinning. Brushes will stop approximately 2 seconds after the grips are released.

NOTE: While scrubbing, check the needle position of the brush pressure meter. For normal scrubbing, the indicator should be in the MIDDLE to LOWER green section, as selected by the machine.

ATTENTION: Do not operate with the needle in the RED zone. This will cause the circuit breakers to trip.

If necessary, pad pressure can be adjusted using the increase (+) and decrease (-) buttons located on the control console. Press the increase (if pressure is too low) or decrease (if pressure is too high) button until desired pressure is achieved.

- While scrubbing, check the needle position of the brush pressure meter. For normal scrubbing, the indicator should be in the MIDDLE to LOWER green section.
 - To increase (+) or decrease (-) pad pressure. Press and hold brush switch until desired pressure is achieved.
- 3. Check skirt for proper adjustment. To adjust the skirt on the scrub head, loosen the latch located on the rear of the scrub head. Push the skirt evenly to the floor, and fasten the latch, securing the skirt's position. During operations where the squeegee is off the floor, such as double scrub or strip, be sure the skirt is positioned slightly off of the floor to avoid "plowing" solution.
- To activate solution flow to pads or brushes during scrub operation, press solution switch to the ON position.
 - Solution flow can be regulated by turning the flow adjustment knob toward the minimum or maximum positions.
- 5. To lower the squeegee, lift the handle while pressing to the right, then lower to the floor. The vacuum motor will start when the handle is placed in the lowest position (Figure 5).

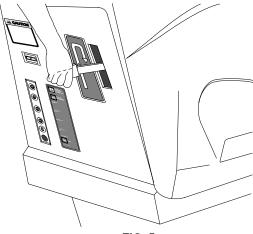

FIG. 5.

 To begin scrubbing, slowly twist the handle control grips in the direction of desired travel. The scrub motors will only start if they are in lowered position.

ES™ Switch (Option)

The ES[™] switch turns on and off the solution recycling system.

CLEANING WITH THE MACHINE

Remove any potential obstructions to the brushes or squeegee by sweeping the area to be cleaned prior to operating the machine.

When operating the machine, work at a pace that delivers the cleaning performance desired, and is safe for the area being cleaned. Always operate at a slower speed when working around walls or obstacles. When turning, reduce speed to a lower level to maintain maximum control.

The machine's unique squeegee system encompasses the brushes, therefore it is not necessary to turn off the solution flow when making turns. This squeegee system also enables you to travel in reverse without lifting the squeegee off of the floor.

WARNING: Flammable materials or reactive metals can cause explosion or fire. Do not pick up.

OPERATING TIPS

Do not park the machine for long periods of time on resilient floors. The weight of the machine can leave marks on the floor.

FOR SAFETY: Before leaving or servicing machine, stop on level surface and turn off machine.

If your machine is equipped with foam filled tires, strong cleaning solutions will cause the tire to "bleed" on the floor. This is normal due to the mold release compound used in making the tires, and it should cease after a few weeks of use.

The harder you work the machine (heavy brush pressure, etc.) the shorter your run time will be. Only use as much power as is required for the job.

EMPTYING THE TANKS

The solution tank is designed to retain your unused cleaning solution for reuse and savings. It does not require draining after use. Should you choose to drain, however, open the drain hose compartment door located in the lower front area of the machine. Pull out the clear drain hose (smaller diameter). Remove the plug and drain the tank (Figure 6).

FOR SAFETY: Before leaving or servicing machine, stop on level surface and turn off machine.

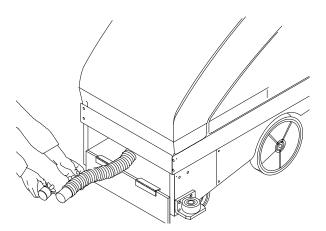

FIG. 6.

The recovery tank is equipped with an automatic float shut—off, which responds to the presence of water or foam. When the tank is filled to it's usable capacity, the float will activate, shutting off the vacuum air flow. The operator will notice an increase in the vacuum motor sound level and a drop in vacuum pickup. When this happens, raise the brushes and squeegee tool and transport the machine to a disposal site. Open the drain hose compartment door and pull the (large) hose from the cavity. Remove the plug and drain the tank. The volume of solution in the tank may cause a rush of solution from the hose. Should the operator desire to control this rush, turn the key on and lower the squeegee to the floor. The vacuum will hold the water in the tank (Figure 6).

The recovery tank should be flushed with clear water under pressure after each use to prevent a building up of heavy debris.

SQUEEGEE ADJUSTMENTS

To operate properly, the squeegee tool must be properly adjusted. **The squeegee tip adjustment** keeps the tool level to the floor, and the blade wiping evenly from tip to tip. To adjust, lower the tool to the floor and drive the machine slightly forward, until the wiping blade lays over. Turn the knob to the right or left to get proper blade deflection at the tips.

The squeegee pressure adjustment assures the blade "lays over" slightly in use and the sharp edge of the blade wipes the floor. To adjust, lower the tool to the floor and drive the machine ahead slightly. Locate the adjustment knob at the top of the pressure arm under the back of the machine. To increase pressure, turn the knob clockwise; to decrease pressure, turn counter–clockwise. Do not apply too much pressure, only enough to lay the blade over, so the sharp edge wipes the floor (Figure 7).

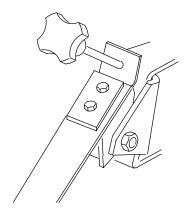

FIG. 7.

SQUEEGEE BLADE REPLACEMENT

Once the wiping edge has worn round, the blade will no longer wipe the floor dry. The wiping blade has four (4) usable edges. Once they are all used, a new replacement blade kit should be installed, not just the wiping blades. To reverse or replace the blades, remove the tool from the machine. Starting at the outside of each end of the tool, remove the bolts toward the center. To install new blades, put all blades in place, and install the bolts from the **center out.**

IMPORTANT: Proper blade installation is critical to maximize water pick up. Make sure blades are straight. Do not over tighten bolts, as this will cause the blades to wrinkle (Figure 8).

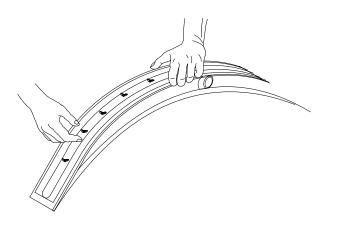

FIG. 8.

OTHER USES FOR THE MACHINE

High Volume Water Pick Up

For high volume, high performance water pick up in circumstances such as floods:

- 1. Lower the squeegee and leave the brushes up.
- 2. You can vacuum water as fast as you can walk.

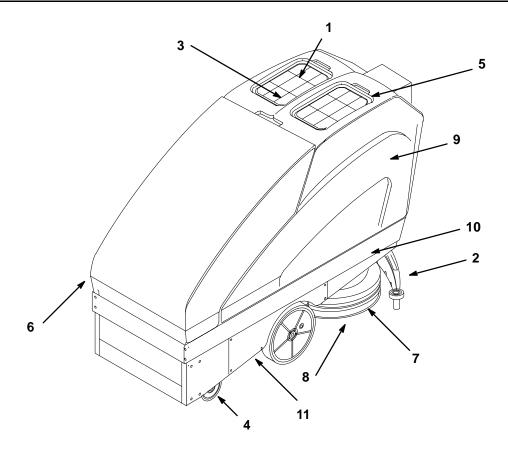

To Polish Floors

- 1. Install polish pads on the machine.
- 2. Leave the squeegee up and lower the scrub head to the floor.
- 3. Polish without water to a high shine!

High Performance Wet Vac

- 1. Remove the hose from the squeegee tool.
- 2. Using a connector, such as a short length of 1–1/2" OD PVC pipe, connect a 1–1/2" vacuum hose, wand, and desired pick up tool to the machine.
- 3. Lower the squeegee handle.
- 4. You have a 27 gallon wet vac at your disposal!

ROUTINE MAINTENANCE

MAINTENANCE CHART

Interval	Key	Description	Procedure	No. Of Service Points
Daily	2	Squeegee	Check for damage and wear	1
			Check deflection	1
	8	Scrub brush or pad	Check for damage and wear	1
	1	Recovery tank	Clean	1
	1	Recovery tank, ES [™] mode*	Clean ES [™] filter	1
	3	Recovery tank float screen	Clean	1
	5	Solution tank, ES™ mode*	Clean	1
	6	Machine	Check for leaks	1
	7	Scrub head skirt	Check adjustment	1
			Check for damage and wear	1
80 Hours	4	Front casters	Lubricate	4
	2	Squeegee	Check leveling	1
	11	Chain	Lubricate	1
800 Hours	9	Vacuum fan motor	Check motor brushes	1
	10	Scrub brush motor	Check motor brushes	1

DAILY MAINTENANCE

BEFORE EACH USE

MAKE SURE THE CHARGER HAS TURNED "OFF" by assuring the needle on the charger is at "0." Unplug the charger from the wall receptacle, then disconnect the charge from the machine (Figure 9).

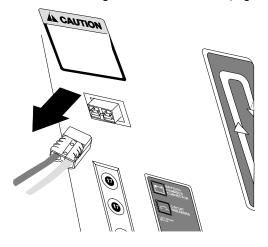

FIG. 9.

Check all battery cells for low water level. Add distilled water to just below the fill ring, if needed. Replace caps. Wipe off the tops of batteries with a clean cloth.

FOR SAFETY: When servicing machine, avoid contact with battery acid.

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep battery compartment open when charging.

Make sure brushes or pad drivers with pads are installed on machine before using the machine in the scrub mode.

AFTER EACH USE

Drain and flush the recovery tank with clean water. Replace the drain plug on the hose and return the hose to its storage compartment.

Remove the float shut—off assembly from the recovery tank. The float shut—off easily pulls off, and and pushes on its mounting plate. Rinse the float shut—off and install on the machine (Figure 10).

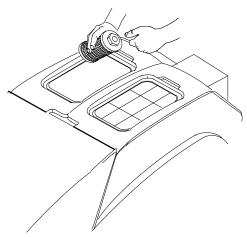

FIG. 10.

Locate the recovery tank filter inside the tank, directly below the float shut off. Unscrew and remove the filter. Rinse off all debris from the filter screen and install.

NOTE: NEVER REMOVE THE RECOVERY TANK FILTER WITH SOLUTION IN THE TANK. Drain the tank first, to avoid having debris enter the tank's drain passages.

Remove the brushes and squeegee tool from the machine. Rinse under water. Inspect the brushes and squeegee blades for wear; replace if required. Reinstall on the machine.

Wipe down the entire machine with a damp cloth. A light spray of Armor–All® or a similar product will keep the exterior looking like new!

BATTERY MAINTENANCE

Remove all battery caps and check the water level in each cell. Add distilled water **only** to cover plates, or a maximum or 1/4" below fill neck ring.

Never add acid to the batteries, only distilled water. Always keep the battery caps on, except when adding water or taking hydrometer readings (Figure 11).

FIG. 11.

CHARGING THE BATTERIES

- Push the machine to a flat, dry surface in a well ventilated area.
- 2. Turn the machine power off.

FOR SAFETY: Before leaving or servicing machine, stop on a level surface and turn off machine.

- 3. Lift the hood to access the battery compartment.
- Check the water level in all battery cells. If the level is low, add just enough distilled water to cover the plates. DO NOT OVERFILL. The batteries can overflow during charging due to expansion.

FOR SAFETY: When servicing machine, avoid contact with battery acid.

5. Plug the charger connector into the battery connector.

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep battery compartment open when charging.

- 6. Plug the battery charger into the wall outlet.
- The charger will start automatically. Check the charger meter to assure the charger is working. When the batteries are fully charged, the charger will automatically turn off.
- 8. After the charger has turned off, unplug the charger from the wall outlet.
- 9. Unplug the charger connector from the battery connector on the machine.

NOTE: Make sure the battery caps are in place while charging.

NOTE: Do not take readings immediately after adding distilled water. If the water and acid are not thoroughly mixed, the readings may not be accurate. Check the hydrometer readings against the following chart to determine the remaining battery charge level:

Specific Gravity at 27°C (80°F)	Battery Charge
1.265	100% Charged
1.223	75% Charged
1.185	50% Charged
1.148	25% Charged
1.110	Discharged

NOTE: If the readings are taken when the battery electrolyte level is any temperature other than 27°C (80°F), the reading must be temperature corrected. Add or subtract to the specific reading 0.004 (4 point) for each 6°C (10°F) above or below 27°C (80°F).

WEEKLY MAINTENANCE

Inspect the scrub head skirt for adjustment and wear. For proper adjustment, the skirt should be resting on the floor, with the brushes at the desired pressure. To readjust, lower the scrubber head to the desired pressure. Release the clamp on the skirt, and push the skirt down until it rests on the floor all the way around the casting. Tighten clamp. If the skirt is torn or worn beyond adjustment, replace (Figure 12).

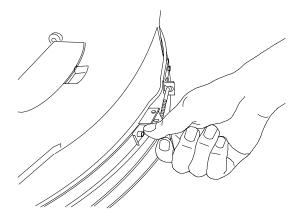

FIG. 12.

MONTHLY MAINTENANCE

• Clean the top surface of the batteries and terminals, and check for loose connections. Use a strong solution of baking soda and water. Brush the solution sparingly over the battery tops, terminals, and cable clamps. DO NOT allow any solution to enter the batteries. Use a wire brush to clean the terminal posts and cable connectors. After cleaning, apply a coating of clear battery post protector to the terminals and cable connections. Keep the tops of the batteries clean and dry.

Keep all metallic objects off the top of the batteries, which may cause a short circuit. Replace any worn or damaged wires.

- Grease the swivel zerk and the wheel zerk on each front caster.
- Lubricate the squeegee wing screws and the front drain door hinge.
- Inspect float and vacuum motor screen. Replace, if required.
- Grease the drive chain. Adjust tension, if required (Figure 13).

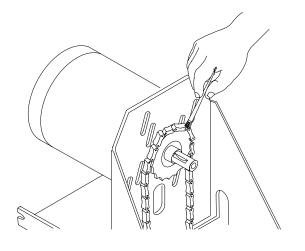

FIG. 13.

QUARTERLY MAINTENANCE

NOTE: It is recommended six month and annual maintenance procedures be performed by technicians from your authorized Service Center. Inspection, adjustment, and lubrication are not warrantable items, and thus may be performed by most qualified service people. Ask your service center for a Planned Maintenance Agreement, to assure your machine is in top operating condition at all times!

Inspect the vacuum motor brushes. Replace if worn to 10 mm (0.38 in) or less (Figure 14).

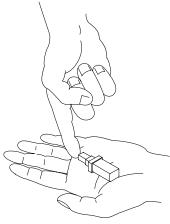

FIG. 14.

Inspect the carbon motor brushes in both drive motors, plus the traction drive motor. Replace if worn to 10 mm (0.38 in) or less.

OPTIONAL KITS AND ATTACHMENTS

The following options are available, at an additional cost, for field or factory installation.

FOAM FILLED TIRES

A softer tire used on rough or grouted tile floors, or where extra traction is needed. Field installation is available.

IMPORTANT: Foam filled tires are required if the machine is used on grouted tile floors. Drive train warranty will be void unless so equipped! See safety instruction section of this manual for details.

HIGH BUMPER ROLLER KIT

Mounted on the front corners of the machine, to protect the machine and fixtures. Field installation is available.

POWER WAND ATTACHMENT

The optional power wand attachment has both squeegee blades and a scrub brush for maximum reach cleaning. Its low profile swivel head design provides fast and effective cleaning under appliances and fixtures. This is available as a field installed option only.

ES™ (Extended Scrub)

The ES[™] option package allows you to transform your scrubber into a solution recycle machine simply by flipping a switch. This is available as a field installed option only.

TROUBLE SHOOTING

PROBLEM	CAUSE	SOLUTION
Machine does not operate.	Key switch is off.	Turn key to "ON".
	Batteries discharged.	Charge batteries.
	Loose or corroded battery cables.	Clean and lubricate.
	Electrical malfunction.	Contact Service Center for assistance.
Machine does not self propel	Key switch is off.	Turn key to "ON".
	Drive circuit breaker is tripped.	Reset Breaker.
	Drive chain is broken.	Contact Service Center for assistance.
	Electrical malfunction.	Contact Service Center for assistance.
Circuit breaker for transport drive trips.	Operator attempting to negotiate grades in excess of machine capabilities.	See safety instructions in this manual for instructions.
	Machine travel obstructed.	Remove obstructions.
	Operator using directional control as a brake.	Cease using directional control as a brake.
	Caster or differential bearings are dragging.	Contact Service Center for assistance.
	Work motor brushes.	Contact Service Center for assistance.
Poor solution flow.	Solution tank filter is plugged.	Remove and clean filter.
	Min/Max control malfunction.	Contact Service Center for assistance.
	Electrical malfunction.	Contact Service Center for assistance.
Brush motor(s) do not operate.	Circuit breaker(s) tripped.	Reset breaker(s), reduce pressure.
	Scrub head not lowered.	Lower head to floor.
	Transport grips not activated	Grips must be activated for brushes to operate.
Circuit breakers on brush motor trip	Excessive brush pressure.	Reduce pressure.
	Improper brush or pad for operation.	Use correct, or less aggressive pad based on application.
	Dirty pads.	Replace or clean.
	Defective breaker(s).	Contact Service Center for assistance.
	Worn motor brushes.	Contact Service Center for assistance.
Vacuum motor will not operate.	Key switch to "OFF".	Turn key to "ON".
	Squeegee lift handle not lowered.	Lower handle to lowest point.
	Electrical malfunction.	Contact Service Center for assistance.

TROUBLE SHOOTING -continued

PROBLEM	CAUSE	SOLUTION
Poor vacuum pick up.	Recovery tank lid not properly sealed.	Insure float housing is in place and locked.
	Filter cage screen plugged.	Clean.
	Recovery tank drain hose left open.	Replace cap.
	Hole or leak in vacuum hose.	Repair or replace.
	Blockage in pick up hose or wand.	Inspect hose and tool for blockage and clean. Inspect recovery tank at hose entrance for material pick up.
	Low battery charge.	Charge batteries.
	Leak in recovery tank.	Contact Service Center for assistance.
	Vac motor malfunction.	Contact Service Center for assistance.
	Electrical malfunction.	Contact Service Center for assistance.
Squeegee streaks, uneven pick up.	Squeegee obstructed.	Check and clean tool and blades. NOTE: Sweep floor before scrubbing.
	Squeegee angle out of adjustment	Adjust to proper angle
	Improper squeegee pressure	Adjust pressure
	Squeegee blades worn	Reverse or replace
	Inadequate squeegee lubrication for floor conditions	Increase solution flow
	Blades installed improperly	Refer to Squeegee Blade Installation Section of this manual
Batteries deliver below normal run	Batteries not fully charged.	Charge batteries.
time.	Electrolyte level is low.	Fill to proper level and charge (<i>DIS-TILLED WATER ONLY</i>).
	Cables are loose or corroded	Clean and lubricate
	Pad pressure too heavy	Reduce pressure
	Improper pads causing too much amp draw	Change to proper pads
	Charger is defective	Contact Service Center for assistance
	Battery is defective	Contact Service Center for assistance

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep battery compartment open when charging.

FOR SAFETY: When servicing machine, wear protective gloves when handling batteries or battery cables. Avoid contact with battery acid.

BATTERY SPECIFICATIONS:

6 – 6 VOLT 235AMP @ 20 hr rate

INSTRUCTIONS

Step 1:

Turn Key to OFF. This prevents any motors from accidentally starting when battery connections are made.

Step 2:

Carefully set batteries in compartment and arrange battery posts as shown.

Step 3:

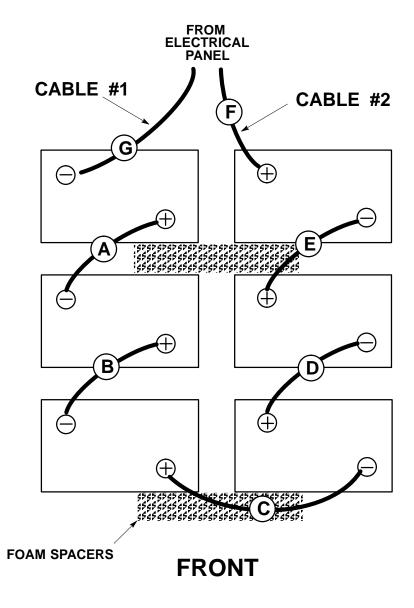

Insert foam spacers between batteries as shown and place a translucent terminal cover over each post.

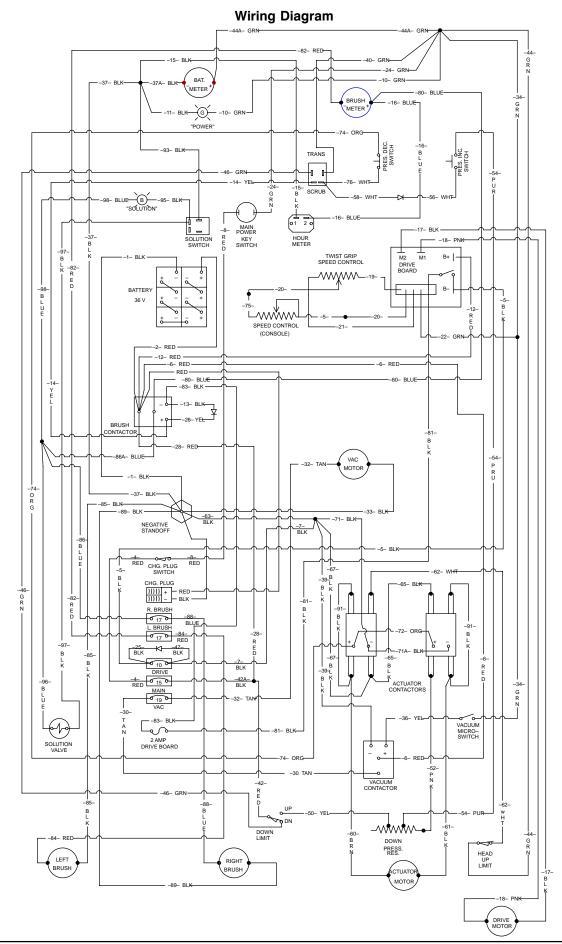

Step 4:

Connect cables to battery posts in order as labeled (RED to POSITIVE & BLACK to NEGATIVE). Cover post with rubber boot.

NOTE: Once final battery cable connection is made the scrubber head will automatically raise to transport position. This is normal.

CAUTION: Be careful not to bridge wrench from post to post when connecting cables. This could cause sparking and create an explosive hazard.
