DustGuard™ Provides Over 70% Productivity Increase

DustGuard ™ – Unique system on Advance industrial sweepers that uses fine water mist like fog to suppress the majority of side broom generated fugitive dust.

Benefits

- Extends dust control across the entire sweep path, not just limited to the main broom
- Side brooms can be used for greater productivity without the penalty of side broom generated fugitive dust

DustGuard™ Productivity Gains Explained

- SW8000™ dust controlled sweep path is 77 inches which includes the main broom and dual side brooms
- Tennant S30 dust controlled sweep path is 45 inches which includes only their main broom (no real side broom dust control)
- 77 – 45 inch = 32 inch greater dust controlled sweeping path and productivity with SW8000™
- SW8000's 77 inch dust controlled path is 71.1% larger than the S30's 45 inch path (32 / 45 = 0.711 or 71.1%)
