# DULEVO D.zero<sup>2</sup>: ZERO EMISSIONS, TOP PERFORMANCE

Today, Dulevo International has designed the first fully electric street sweeper, guaranteeing an optimum performance and minimal environmental impact.

The new machine, named the D.zero<sup>2</sup>, has been created to comply with four fundamental characteristics that constitute its design philosophy and that make it a unique product within the sector.

ZERO EMISSIONS

ZERO MANOEUVRE PROBLEMS

ZERO LIMITATIONS

ZERO RISKS

**D.zero<sup>2</sup>**

# Zero

## EMISSIONS

The new Dulevo electric street sweeper is characterised by the fact that zero dust pollution, Zero CO2 Emissions and zero harmful gases are re-emitted into the environment during the collection phase.

The various work functions, being electric and therefore not dependent on a traditional engine, reduce noise emissions by a staggering 30% with respect to traditional street sweepers. This particular characteristic enables the operators to make the most of the night shift, cleaning the streets without disturbing the peace.

# zero

## MANEUVER PROBLEMS

The new electric model, thanks to its size and optimal maneuverability, is able to operate superbly within historic city centres and tight spaces, such as cycle paths and pedestrian zones.

Being an articulated street sweeper, steering by means of the central joint on the two half-frames facilitates even the most complex of manoeuvres.

# Zero

## RISKS

Safety requirements regarding both the operator and other persons who frequently come into contact with the machine (maintenance technicians, personnel on the ground for joint operations etc.), has led us to adopt low-voltage technology, so as to nullify the risks associated with electric equipment.
