DULEVO D.zero²: ZERO EMISSIONS, **TOP PERFORMANCE**

Today, Dulevo International has The new machine, named the D.zero², designed the first fully electric has been created to comply with four street sweeper, guaranteeing an fundamental characteristics that optimum performance and minimal constitute its design philosophy and vironmental impact. that make it a unique product within the sector.

DULEVO D.zero²: ZERO EMISSIONS, **TOP PERFORMANCE**

DULEVO INTERNATIONAL: OUR COMMITMENT FOR A CLEAN WORLD

Dulevo International is the leading Italian manufacturer in the industrial and urban cleaning sector, thanks to its street sweepers and indoor and private floor care products. Present in over 80 countries worldwide, Dulevo International is a leading global manufacturer, boasting a state-of-theart research and development facility and an annual production excess of 2,000 machine

The world changes, cities change. Municipalities are paying more and more attention to the environme and the means to reduce the impact on both the land and its inhabitants to as great an extent as possible. Subsequently, when it comes to its own products, Dulevo International has the harmful emissions associated wit the best-performing machines

Through important partnerships and company-owned patents, it has perfected its dust filtration systems, thereby eliminating PM10 emissions altogether.

With the mechanical suction Dulevo International has o inificant reduction in the emitted by its machin operators to work effectively without creating acoustic disturbances.

Over the years, Dulevo Internat has designed a methane gas-po sweeper, capable of ensuring emissions enforced by the law.

The new Dulevo electric street sweeper is characterised by the fact that zero dust pollution, Zero CO2 Emissions and zero harmful gases are re-emitted into the environment during the collection phase.

The various work functions, being electric and therefore not dependent on a traditional engine, reduce noise emissions by a staggering 30% with respect to traditional street sweepers. This particular characteristic enables the operators to make the most of the night shift, cleaning the streets without disturbing the peace.

The new electric model, thanks to its size and optimal manoeuvrability, is able to operate superbly within historic city centres and tight spaces, such as cycle paths and pedestrian zones.

Being an articulated street sweeper, steering by means of the central joint on the two halfframes facilitates even the most complex of manoeuvres.

MANOEUVRE PROBLEMS

.zero

Capable of replacing traditional machines with endothermic engines in terms of power and sweeping capacity, the new Dulevo ensures a full work shift, without having to reload the vehicle.

If on the one hand, the sweeping performance is on par with that of a traditional street sweeper, then on the other, the running and maintenance costs are drastically lower. In fact, the running costs of an electric sweeper are approximately 80% lower than those of a diesel-powered machine*, working the same number of hours and shifts. The maintenance costs are also lower. The battery life of the Dulevo electric sweeper is guaranteed up to 3,000 cycles*.

*Dulevo internal assessment

RISKS

Safety requirements regarding both the operator and other persons who frequently come into contact with the machine (maintenance technicians, personnel on the ground for joint operations etc.), has led us to adopt low-voltage technology, so as to nullify the risks associated with electric equipment.
